

»COLOR FACTS, NOT GUESSWORK«

QUALITY CONTROL FOR PROOF,
MONITOR & PRESS | FAST AND SECURE |
PROFESSIONAL AND INNOVATIVE

»ORIS CERTIFIED PROOF«

Choose ORIS Certified Proof for quality control of your hard-copy proofs. Using an easy-to-use hand-held spectrophotometer or the built-in spectrophotometer in professional inkjet printers, the software compares measurements against stored values and gives you an instant pass/fail indication and prints a label with key parameters for affixing to the proof. All measurements are stored and can be printed out as a detailed report and as a trend analysis over time. Subjective decisions are eliminated. Make your color decisions based on facts. Spot colors can be measured individually or as a strip and compared to the stored library values of Pantone, HKS or corporate colors.

»ORIS CERTIFIED MONITOR«

ORIS Certified Monitor is your choice for simple and efficient monitor certification. Using all of the features of ORIS Certified Proof but with a rendering of the control bar as a series of flashed patches on the monitor, ORIS Certified Monitor performs the same certification to industry standards and spot colors and gives you an instant readout. Includes automatic calibration for Eizo monitors and JUST light booths. Measures monitor uniformity against ISO 12646.

»ORIS CERTIFIED PRESS«

ORIS Certified Press completes the suite. Space-saving test strips, gray control strips and customer-specific color bars can be inserted into the trim between pages on the printing plate. Precise measurements of all printing parameters such as uniformity across and with the run, tonal value increase, primary/secondary colors, gray balance, etc. are captured and reported in a comprehensive, yet easy-to-read, graphical report with trend analysis. Reduce make-ready time and save on paper wastage with this great tool for press management.

»ORIS CERTIFIED SUITE«

- Characterization for most industry standards
- Includes the new IDEAlliance ISO 12647-7
- Automatic measurement evaluation
- Trend reports
- Windows and Macintosh versions
- Spot color measurement to standard libraries
- Customizable targets and tolerances

»THE ORIS PRESS MATCHER WORKFLOW«

Both ORIS Press Matcher products integrate with any prepress workflow and fully support variable data.

»SUPPORTED FILE FORMATS«

ORIS Press Matcher products support all known prepress file formats, including PDF/X, composite or separated PDF and PostScript, EPS, DCS (Version 1 and 2, single or multiple), JPEG, TIFF, TIFF/ITP1, 1-Bit TIFF, Scitex Handshake CT/LW, Scitex NLW, NCT and CopyDot.

»RECOMMENDED SYSTEM CONFIGURATION«

Computer with Intel® Core 2 Quad, Q6600 or similar, 2.4 GHz, 2 x 4 MB level 2 (L2) cache, min. 2 GB RAM, 500 GB HDD or raid system, DVI video board with DirectX 9c support and Direct 3D acceleration, a USB port, a CD-ROM drive and a 10/100 mbps Ethernet connection. Operating system: Microsoft Windows 2003 Server, Windows Server 2008, Windows XP Professional or Windows Vista. The hardware requirements depend on the operating system used and on the number and type of output devices.

ORIS Press Matcher // Web and ORIS Press Matcher Pro have been certified with several digital presses under the FograCert Validation Printing System Certification Program. These solutions have also been utilized for GRACoL Certifications. CGS is continually partnering with companies in the digital print market on new certifications.

One color standard on multiple output devices

»ONE COLOR STANDARD ON ANY OUTPUT DEVICE«

»ORIS PRESS MATCHER PRO«

ORIS Press Matcher Pro incorporates the color management technology of ORIS Color Tuner to produce high-resolution files for your CTP system, digital press, wide format printer or any other device by matching the color spaces using our patented 4D color transformation process. The result is standardized color across multiple devices bringing high-quality, consistent color to all of your printing projects. ORIS Press Matcher Pro is unique in its ability to provide a central color management server extending to any number of devices across multiple locations.

»ORIS PRESS MATCHER // WEB«

ORIS Press Matcher // Web offers the same superior accuracy as ORIS Press Matcher Pro but is specifically designed for directly driving office and enterprise-level medium production digital printers and copiers. With its intuitive, browser-based user interface, ORIS Press Matcher // Web provides a comprehensive internet, or intranet, solution for consistent color across multiple output devices.

ANY DIGITAL PRINTER | ANY DIGITAL PRESS | ANY CONVENTIONAL PRINTING PRESS...THE SAME RESULT!

GET THE RIGHT TOOL FOR THE TOUGH NUTS!

»ORIS PRESS MATCHER // WEB - ORIS PRESS MATCHER PRO« FOGRA, SWOP, GRACoL...GUARANTEED!

An intuitive, wizard-based calibration process takes you to full industry certification quality in three simple steps. Consistent color across all devices - worldwide.

»CONVENTIONAL PRESS«

»ONE COLOR STANDARD...SAME RESULT«

»PROFESSIONAL SOLUTIONS FOR PROFESSIONAL COLOR«

The right color is essential in any marketing campaign. Different printing processes, such as offset and digital, produce different results from the same print job data and make it impossible to achieve consistency of color and brand management. Printing presses, especially digital, vary according to location, environment and time and normally require a high degree of color expertise from the press operator in order to produce acceptable results.

Now, ORIS Press Matcher brings you accurate color reproduction across any number of output presses in a three step process that is easy to understand and simple to use.

»ORIS PRESS MATCHER PRO«

FOR HIGH PERFORMANCE PRODUCTION SYSTEMS.

»ORIS PRESS MATCHER // WEB«

FOR ALL ENTERPRISE PRODUCTION SYSTEMS AND COPIERS.

»ADVANTAGES«

- Accurate and reproducible color
- Perfect gray balance
- Print to industry standards, e.g. ISO coated V2
- Contract proofing at local or remote sites
- Fully automated

GLS COMPANIES INC. RELIES ON ORIS PRESS MATCHER PRO AND HP INDIGO FOR GRACoL CERTIFICATION AND OFFSET COLOR MATCHING

"As a G7 Master Printer becoming GRACoL certified with HP Indigo allows us to maintain color consistency between our offset presses and HP digital presses. Clearly this supports one of our company's principles to use the most modern technology, techniques, process controls and standards in our day to day production." Gary Garner, President & CEO | Minneapolis

SCHOFELD AGENCY FOR COMMUNICATION & DESIGN RELIES ON ORIS PRESS MATCHER AND XEROX DOCUCOLOR 252 FOR PROOFING

"Outstanding proof quality, simple and fast operation, and the flexibility of this solution perfectly suit our requirements." Gil Schofeld, Partner | Bremen
